

**REMARKS**

Claims 1-11, and 13-14 have been rejected under 35 USC 102(e) as anticipated by Slotznick. The rejection is respectfully traversed.

Slotznick discloses a system for displaying primary and secondary information. The primary information is retrieved from a first information memory device and the second information is retrieved from a second memory device (see, for example, col. 4, lns. 38-49). Specifically, the first and second information exists in two different memories such that the first and second information is provided for separate displaying in separate screens. Hence, separation of the information is not necessary. In the claimed invention, on the other hand, the supplied information is configured in a first and second element for simultaneous display on the same screen page. Hence, the complete first and second information is provided for displaying on the same screen. This means that the first and second element must be separated.

In Slotznick, separation is not necessary since the first and second elements already exist in separate memories. Contrary to the claimed invention, the first and second information must first be merged for displaying on the same screen (see, for example, col. 4, lns. 49-51). Moreover, when a user requests the second information, a full display of the second information replaces the first information (see, for example, col. 4, lns. 52-62) on the same screen.

Additionally, in Slotznick, first information and a portion of the second information are displayed on the same screen, where the information is stored in a first information memory device. Only in the case of a request for more detailed second information is the complete second information displayed on a second screen. In the claimed invention, on the other hand, information is separated into a first and second element, where the first and second element is supplied from a network for display on the same screen. The first and second element are separated, and the separate elements are displayed on different screens (i.e. separate screens).

Claim 12 has been rejected under 35 USC 103(a) as unpatentable over Slotznick in view of Barkan. The rejection is respectfully traversed for the same reasons presented in the arguments above, and for the following reasons.

Barkan discloses two different functions being activated, depending on the position of a terminal (col. 4, ln. 58- col. 5, ln. 5; and abstract). However, Barkan fails to disclose the use of portable devices for the display of primary and secondary information.

Since the recited structure and method are not disclosed by the applied prior art (either alone or in combination), claims 1 and 8 are patentable. Claims 3-7 and 9-14, depending wither directly or indirectly from claim 1 or 8, are similarly patentable.

Entry of this amendment after-final is appropriate since it incorporates claim 2, previously Examined, into independent claim 1. In view of the above, each of the presently pending claims in this application is believed to be in immediate condition for allowance. Accordingly, the Examiner is respectfully requested to withdraw the outstanding rejection of the claims and to pass this application to issue. If it is determined that a telephone conference would expedite the prosecution of this application, the Examiner is invited to telephone the undersigned at the number given below.

In the event the U.S. Patent and Trademark office determines that an extension and/or other relief is required, applicant petitions for any required relief including extensions of time and authorizes the Commissioner to charge the cost of such petitions and/or other fees due in connection with the filing of this document to Deposit Account No. 03-1952 referencing docket no. 449122019400.

However, the Commissioner is not authorized to charge the cost of the issue fee to the Deposit Account.

Dated: March 7, 2006

Respectfully submitted,

By
